

Reputation Monitoring & Management

The PIR Group uses custom built software to monitor and manage an individual or companies online presence. There are four major types of media that are monitored; Print, Social Media, Social Networks, and Writings.

Below you see one of the multiple pages for each of the monitored media. Our management system allows for the itemization of each instance of a name appearing on any web property. Once a web property is collected PIR Group identifies tone of the mention, authority or reach of the property, and the action to be taken. Using this system PIR Group is able to efficiently monitor a name, assess the nature of the property and reputation risk, and create and manage actionable tasks to remove or rebut the property.
